DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4, 6-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Gemma et al (US 4,605,452).

Gemma et al disclose orienting the single crystal in a configuration to provide a better fatigue resistance, similar to the orientation described in applicant's specification, pertaining to the tuning of the natural frequency. Although Gemma et al do not explicitly disclose the tuning of the "natural frequency", it is inherent that every time when Gemma et al arrange the crystal seed to a different orientation, at any angle, the natural frequency has been tuned to a different value. Gemma et al discloses the manufacturing of a turbine blade comprising the steps of investment casting the turbine blade with a single crystal having controlled secondary crystallographic orientation (abstract). The single crystal is placed in a desired orientation *including all angles from 0 to 90 degrees* (col. 13, lines 1-6) to provide a better fatigue resistance (col. 3, lines 10-50). *The orientation of the seed is preferred between zero and twenty degrees* (col. 3, lines 39-41, col. 12, lines 52-65). The secondary orientation would not affect the turbine blade's weight, the turbine blade's shape, or the flexure mode of the turbine blade.

Response to Arguments

3. Applicant's arguments filed 12/23/02 have been fully considered but they are not persuasive.

In response to applicant's argument regarding to the prior art only teaches having the orientation within 0 to 20 degrees, examiner respectfully disagrees. Gemma et al clearly teaches having the crystal orientation from 0 to 90 degrees, however, preferred between 0 to 20 degrees (col. 13, line 5). Applicant claims to orient the crystal seed including all angles between 0 to 90 degrees in which the prior reference, Gemma et al, teaches. Therefore, the prior art teaches the claimed invention as claimed.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
